April 11, 2024

Our Presenter will be Lou Viackus who will discuss AI in Medicine.

Lou received his Bachelor's at Hamilton and his PhD at Boston University's School of Medicine. After a residency at Mass General, he moved to Dartmouth where he is an Associate Professor and Medical Director of Pathology Informatics.

His research focuses on high impact applications of AI Machine Learning to medicine, especially figuring out how to semi-automate routine pathology work and finding ways to integrate disparate data types, such as images, genetics, and clinical chemistry, to derive superior diagnostic, prognostic and therapeutic information.
