

October 13, 2022

Our speakers will be Eric Osterberg and Don Catino.

This month's topic will be Climate Change. Specifically, we will have a discussion about the evidence that the world is experiencing climate change, the likely explanation for the changes being experienced, and potential solutions.

Eric is a PhD, Associate Professor of Earth Science at Dartmouth. He specializes in creating long (50-50,000 years) records of climate change and air pollution by analyzing chemical markers preserved in glacier ice cores and uses that data together with weather reports and climate models to differentiate natural cycles from human-caused changes.

Don Catino, MD and Squires member, is a retired geriatrician with an ongoing interest in the climate debate.
